

Multimap – Senior System Engineer

Background

Multimap is the leading provider of interactive online mapping services in Europe. Our public web site was launched in 1996, and now delivers over 40 million maps per day to more than 8.6 million unique users per month. As a result, Multimap is one of the top ten most visited web sites in Britain.

We are also the number one supplier of Internet mapping to business customers. Our clients can choose from an extensive portfolio of location-based services, which are fully customisable to allow complete integration within the aesthetics of their own web sites. Services can be delivered over a variety of platforms, including web, wireless, PDA, iTV and kiosk-based devices.

The role

The Senior System Engineer will be part of the Infrastructure Team responsible for both project based work, (design, and system integration) as well as providing server based support for our Multimap.com web server infrastructure. Most of these systems are business critical and serve high volume traffic with stringent SLA requirements. You will have several years of experience in a Linux/UNIX Web server systems admin role, ideally in a mixed heterogeneous network.

The role includes but is not limited to:

- Support and maintenance of the Multimap.com web servers (software and hardware), storage systems and networks
- Write technical documentation and provide training to colleagues
- Design and writing code (mainly Perl and Shell scripts) for task automation and integration
- System design and integration
- Users and customers support
- Availability for on-call support

Candidate requirements

Technical Skills:

- Excellent Linux/UNIX (CentOS, Fedora) System Administration, troubleshooting experience (min 5 years)
- Excellent Perl and Shell scripting
- Good knowledge and experience of MySQL, Oracle, and SQL queries
- Good knowledge and experience of Web Servers Administration (Apache and Tomcat), development (HTML, XML preferred), and builds
- Good network knowledge (LAN, WAN, SNMP, Cisco routers, TCP/IP)
- Experience in monitoring tools (Nagios)
- Experience in system design/integration

Desirable:

- Some java and java-scripts experience
- Postgres DB

Non Technical Skills:

- Experience in customers/users support
- Ability to work both independently and within teams to deliver objectives within defined timescales and to agreed quality standards
- Effective communication skills: verbal, written, listening – clear, unambiguous, concise.
- Ability to identify, assimilate and process relevant information in order to understand an issue and decide on the appropriate actions to undertake and the escalation route where required.
- Ability to effectively prioritize workload and conflicting requests.
- Ability to work through problems in an ordered and logical manner in order to achieve set goals and objectives

Other requirements:

- This position is based in our London office

Interested candidates should email a CV marked 'Senior System Engineer' to recruitment@multimap.com. **No agencies please**
